Overview

Research in Cadmium telluride dates back to the 1950's because it is almost perfectly matched to the distribution of photons in the solar spectrum in terms of optimal conversion to electricity. Early leaders in CdS/. Best cell efficiency has plateaued at 16.5% since 2001 (a record held by NREL). The opportunity to increase current has been almost fully exploited, but more difficult challenges associated with junction quality, with properties o. The major advantage of this technology is that the panels can manufactured at lower costs than silicon based solar panels. First Solar was the first manufacturer of Cadmium telluride panels to produced solar cells for less tha. CdTe panels have several advantages over traditional silicon technology. These include: 1. Ease of manufacturing: The necessary electric field, which makes turning solar energy into electricity possible, stems from prope. While price is a major advantage, there are some drawbacks to this type of solar panels, namely: 1. Lower efficiency levels: Cadmium telluride solar panels currently achieve an efficiency of 10.6%, which is significantly lowe.
