

Energy storage battery system with circuit breaker

Overview

DC MCCB breaker installed at string level in a containerized ESS battery rack, providing fault isolation for 1000–1500 VDC battery strings. It answers critical questions about how to select, install, and maintain the right DC circuit breaker to protect high-value assets like solar panel arrays, battery energy storage systems (BESS), and electric vehicle (EV) charging stations. The BDM breakers are designed for applications including solar photovoltaic, electric vehicle charging stations, commercial battery. The electrical integration design of a Battery Energy Storage System (BESS) is based on the application scenario and includes various aspects such as DC, high/low voltage distribution, control power distribution, grounding, lightning protection, and safety standards. In energy storage battery systems, fuses and circuit breakers are crucial circuit protection components, each with its own function and complementing each other. The disconnecter allows safe isolation for maintenance or emergency.
