

Finland Home solar Energy Storage Project

Overview

Finnish renewable energy developer Solarigo has announced plans to develop a 250 MW solar power park integrated with battery energy storage in Finland, marking one of the country's largest planned hybrid renewable energy projects. Construction has officially started on Finland's latest large-scale energy storage project, marking a pivotal moment for renewable energy integration in the Nordics. This initiative aims to stabilize the national grid as Finland accelerates its shift toward wind and solar power. The development underscores the growing momentum behind solar and battery storage. Alight is ramping up its portfolio with the acquisition of two solar projects in eastern Finland from Finnish developer 3Flash, totalling over 200 MW of planned solar capacity and additional battery storage. The project combines renewable energy with battery storage and has now been successfully connected to the national grid. Chinese solar giant Longi Green Energy Technology Co announced on Saturday the successful grid connection and operation of its first energy storage project in Finland.
