

Flexible solar module film

Overview

Solar PV Flex is our lightweight thin film alternative to traditional photovoltaic arrays. This innovative technology is ideal for lightweight deck types, curved roofs and sites with planning constraints. Our flexible, low mass, and radiation-hardened solar cell allows us to reimagine packaging. Our unique packaging. Flexible modules can be used to open up new fields of application for photovoltaics (curved surfaces, rollable roofing membranes, ultra-light solar modules, integration of solar cells in textiles and vehicles, etc. Bonded on our Excel® Solar membrane, this is an innovative solution for refurbishment and new. Ultra-barrier film is engineered to replace glass in flexible solar applications. 3M™ Dielectric Tapes perform as reliable insulators when used in conjunction with buses/foils in thin film solar. HeliaSol transforms buildings into clean solar power plants for green electricity generation. The solar film has an integrated backside adhesive, which means that it can be easily glued on the surface and can be connected and used.
