

Photovoltaic installation does not include the price of photovoltaic panels

Overview

Solar photovoltaic module prices refer to the cost of the solar panel itself, and do not include installation or other system components. Prices are compiled from three sources: Nemet (2009) for 1975-2003, Farmer & Lafond (2016) for 2004-2009, and IRENA for 2010 onward. The quoted price of a solar power system also includes soft costs that are not evident when looking at a completed installation: permitting, inspections, grid interconnection, taxes, transportation, land acquisition, design work, skilled labor, customer acquisition, overhead, profit margins, etc. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. Here are 2025 average costs across major markets: Example: A typical 6 kW residential system costs between \$15,000 and \$36,000 before incentives, depending on your location and chosen components. Your. There are two general categories of PV systems costs: capital costs and operation and management (O&M) costs. Solar installation costs range from \$2.
