

Solar power home generator

Overview

The first thing to consider is your PV (photovoltaic) output. That's the amount of power your solar panels generate. You need to make sure that the voltage and amps are within the limit of what the battery can handle. You also need to check that your solar panels can charge the batteries quickly enough. If it takes days. Battery capacity is expressed in amp-hours (Ah) or watt-hours (Wh). Generally, for most applications, you want a solar generator with a battery capacity of at least 1,000 watt-hours. Capacity doesn't tell you everything you need to know about the battery's capability. In addition to how much charge it can store, you also need. This is something many people forget to check when buying a solar generator only to discover they cannot plug in their fridge or charge their phone. A good solar generator should have three output options: an AC outlet, a 12V DC outlet, and USB ports. The. Don't just check the inverter rating; also check what kind of inverter it is. There are three types: pure sine wave, modified sine wave, and square wave inverters. I won't bore you with the technical.
