

South African power storage project

Overview

This project aims to decommission one of South Africa's oldest coal-fired power plants and replace it with 220 MW solar PV and wind power, as well as 150 MW battery storage. The funding comprises significant amounts of highly concessional financing. Utility-scale battery storage could be one pillar to provide additional grid stability by helping to meet peak demand, help integrate variable renewables, and, especially for industrial consumers, provide continuous electricity during load shedding and outages. South Africa is aiming to procure. South Africa has reached a major milestone in its renewable energy transition, as three cutting-edge Battery Energy Storage System (BESS) projects, collectively known as Oasis, progress toward implementation. Several major renewable energy projects currently under construction will go live this year, according to industry organisation Sapvia.
