

Spherical power station solar panels

Overview

The spherical generator works by using a large transparent sphere to focus sunlight onto a small surface area of mini-solar panels. Efficiency is enhanced because the solar panels used in the device are so small. A new spherical solar cell design aims to boost solar power harvesting potential from nearly every angle without requiring expensive moving parts to keep tracking the sun's apparent movement across the sky. The technology relies on photovoltaic cells to convert sunlight into electricity, significantly increasing efficiency compared to traditional. Based on 3-dimensional light capturing micro spherical solar cell, Sphehar®, we provides see-through BIPV (Building Integrated Photovoltaics), compact solar modules for electronic devices and original concepts of solar lighting products. What if I told you that an innovative invention could switch things up?

Researchers from Dubai have created something unique; it is called a spherical solar.
