

Temperature and humidity controlled type power cabinet for substations

Overview

This is cabinet climate control built for substations, maintenance centers, and wind O&M sites. Our climate controlled storage cabinets deliver stable temperature and humidity, so rubber, polymer, and composite materials age slower, inspections pass more often, and field crews stay ready. The goal was not just to supply a metal box, but to create a cabinet that could protect internal equipment, simplify service access, and remain dependable in real outdoor. A humidity cabinet is a specialized storage unit that maintains low humidity levels. Why Use a Humidity Cabinet?

Humidity cabinets help prevent. This document sets out the policy guidelines for the heating and ventilation of switch rooms and combined switch/control rooms at 11kV and 33kV for Primary, Grid and major network substations; and for separate control rooms at all voltages. The guidelines apply to the design and construction of all. "TANCO" brings the ultra-high-tech Triple walled Microprocessor controlled Humidity & Temperature Control Cabinet (Refrigerated) forced convention type.
