

What should be placed on both sides of the battery cabinet

Overview

The ventilation devices on both sides of the explosion-proof cabinets should be turned on, and the inside of the cabinets should be kept dry and well-ventilated. The properly installed enclosure is earthed and IP21 rated against foreign objects and is safe to operate. Guarding of live parts shall comply with 110. (C). The system's output may be able to be placed into an electrically safe work condition (ESWC), however there is essentially no way to place an operating battery or cell into an ESWC. Someone must still work on or maintain the battery system. Working on a battery should always be considered energized. But what exactly are the OSHA battery storage requirements?

The short answer is that OSHA (the Occupational Safety and Health Administration) mandates that you store batteries in a cool, dry, and well-ventilated area, separated by type, and with proper safety equipment readily available.
